TO THE.

NOBLE SOCIETY

COLLEDGE-YOUTHS.

GENTLEMEN,

- Have seen a Treatise, intituled, de Tintinnabulis --that is, of little Bells, the Language Latin, but pen'd by a Dutchman, being a Discourse of Striking Tunes on little Bells with traps under the feet; with several Books on several Instruments of Musick, and Twnes prick't for the Same: Then considering that the Well-wishers to either of them, took great pains to make plain the use of them, I thought it worth a Dayes labour, to write something on this Art or Science, that the Rules thereof might A 2

The Epistle Dedicatory.

might not be lost and obscured to some, as the Chronicles before William the Conqueror, being given only by Tradition from Father to Son. Wherefore I humbly intreat you favourably to accept this small Treatise, as a foundation whereon may be raised a famous Structure; and if any one objects a fault, excuse it with the Ringing term—He was Over-bell'd—So you will much oblige bim that is a Well-wisher to your Recreation,

CAMPANISTA.

On the Ingenious Art of RINGING.

W Hat Musick is there that compar'd may be To well-tun'd Bells enchanting melody ! Breaking with their sweet found the willing Air. And in the liftning ear the Soul enfnare; The ravisht Air such pleasure loth to lose, With thousand Echoes still prolongs each close; And gliding streams which in the Vallies trills, Affifts its speed unto the neighbouring Hills; Where in the rocks&caves, with hollow grounds, The warbling lightfome Element rebounds. This for the Musick: In the Action's Health, And every Bell is a Wit's Common-wealth: For here by them we plainly may discern, How that Civility we are to learn. The Treble to the Tenor doth give place, And goes before him for the better grace : But when they chance to change, 'tis as a dance, They foot A Galliard, a' la mode de France. An Eighteenscore's a figure dance, but Grandsire Hath the Jig-steps: & Tendrings Peal doth answer The manner of corants: A plain Six-score, Is like a Saraband, the motion flower. When Bells Ring round, and in their Order be, They do denote how Neighbours should agree; On the Ingenious Art of Ringing.

But if they Clam, the harsh sound spoils the sport,
And it is like Women keeping Dover Court:

For when all talk, there's none can lend an ear
The others story, and her own to hear;
But pull and hall, straining for to sputter
What they can hardly afford time to utter.

Like as a valiant Captain in the Field,
By his Conduct, doth make the Foe to yield;
Ev'n so, the leading Bell keeping true time,
The rest do follow, none commits a Crime:
But if one Souldier runs, perhaps a Troop
Seeing him gone, their hearts begin to droop;
Ev'n so the fault of one Bell spoils a Ring,
(And now my Pegasus has taken Wing.)

UPON

Upon the Presentation of GRANDSIRE BOB

t,

To the COLLEDG E-TOUTHS,
By the

AUTHOR OF that PEAL.

Gentlemen of the Nuble Crew
Of Colledge-Youths, there lately blew A wind, which to my Noddle flew (upon a day when as it Snew;) Which to my Brains the Vapors drem, And there began to work and brem, Till in my Pericranium grew Conundrums, how some Peal that's New Might be Compos'd? and to pursue Thefe thoughts (which did so whet and hew My flat Invention) and to frew What might be done, I ftrait withdrew My felf to ponder - whence did accrue This Grandfire Bob, which unto you I Dedicate, as being due Most properly; for there's but few B fid s,

Upon the Presentation of, &c. Befides, fo ready at their Q-(Especially at the first View) To apprehend a thing that's New; Though they'l pretend, and make a [bem] As if the intricat'A they knew; What Bob doth mean, and Grandsire True, And read the courfe without a Clue Of this new Peal : Yet though they forew Their shallow Brains, they'l ne're unglue The Method on't (and I'm a Jew) If I don't think this to be true, They fee no more on't than blind Hugh. Well, let their tongues run Titere tu, Drink muddy Ale, or elfe French Lieve, Whil'st we our Sport and Art renew, And drink good Sack till Sky looks blem, So Grandfire bids you All adien.

John Donne

THE

A R T or Ringing.

Of the Beginning of Changes.

T is an ancient Proverb with us in England (That Rome was not built in a day) by which expression is declared, That difficult things are not immediately done, or in a short time accom-

plished: But for the Art of Ringing, it is admirable to conceive in how short a time it hath increased, that the very depth of its intricacy is found out; for within these Fifty or Sixty years last past, Changes were not known, or thought possible to be Rang: Then were invented the Sixes, being the very ground of a Six score: Then the Twenty, and Twenty-four, with several other Changes. But Cambridge Forty eight, for many years, was the greatest Peal that was Rang or invented; but now, neither Forty-eight, nor a Hundred, nor Seven bundred and twenty, nor any Number can confine us; for we can Ring Changes, Ad infinitum. Although Philosophers say, No Number is infinite, because it can be numbred; for infinite is a quantity that cannot be taken or affigned, but there is (infinitum quoad nos) as they term it, that is infinite in respect of our apprehension: Therefore a Ringers knowledge may seem infinite to dive so infinitely into such an infinite Subject; but least my Discourse should be infinite, I will conclude it, and proceed to the Peals following.

Before I Treat of the method and diversity of Peals, I think it not impertinent to speak something of the Proper-

ties

ties wherewith a Young Ringer ought to be qualified, and then proceed to the Peals. First then, before he is entred into a Company, it is presupposed, that he is able to Set a Bell Fore-stroke and Back stroke, as the terms are: Next, that he know how to Ring Round, or Under-Sally: Then, that he may be complete, it is convenient, that he underitand the Tuning of Bells; for what is a Musician, unless he can Tune his Instrument, although he plays never fo well? To do which, let him learn on some Instrument, or Wyer-Bells, to know a Third, Fifth, and Eighth, which are the principal Concords: Or otherwise, let him get a Pipe called a Pitch pipe, which may be made by any Organ-ma-ker, to contain eight Notes, or more, (according to his pleasure) with their Flatts and Sharps, which will be very useful in the Tuning of Bells. And then this is a general Rule, begin at the Tennor, or biggest Bell, and count 3 whole Notes, then a half Note, or Sharp, 3 whole Notes, then a half Note, or Sharp; and so on, until you come to the least Bell or Treble. For example on four Bells, 1:234, here the 432 are whole B 2 Notes.

Notes, and the half Note or Sharp is between 1 and 2. On Five Bells, 12:345 the 543 are whole Notes; and the half Note or Sharp is between 2 and 3. On Six, 123:456 the half Note of Sharp is between 3 and 4. On Eight Bells, 1:2345:678, one half Note of Sharp is between 5 and 6 and the other between 1 and 2. On Ten, 123:4567:8910; here one half Note is between 7 and 8, and the next between 3 and 4. On Twelve Bells, 12:345:6789:10 11 12. Here one half Note or Sharp is between 9 and 10, the next between 5 and 6, and the other between 2 and 3, which last is made contrary to the former Rule, it being but two whole Notes from the next half Note to it; the reason is this, the Ninth is one whole Note below the Eighth, therefore the 2 must be a whole Note below the Treble, otherwise they would not be a true Eighth, therefore the half Note is put between 2 and 3. Now he that hath these Rules, and a good ear to judge of the Concords, may at any time cast his Verdict (as to Bells, whether they are well in Tune or not) amongst the chief of the Company.

of the Changes.

Change is made between two Belts that strikes next to each other, by removing into each others places, as in these two Figures 1,2. make a Change between them, and they will stand 2, 1, which is called a Change; make another Change between them, and they will stand in their right places, as at first, 1,2. These two Changes are all that can be made on two Bells.

The Changes on three Bells.

On three Bells there are fix feveral Changes to be made; in Ringing of which, there is one Bell to be observed, which is called the Hunt, and the other two are Extream Bells (but they cannot properly be so called, because every Bell hunts in the fix Changes; yet because 'tis commonly Rang by observing a Hunt and two Extream Bells, I will therefore proceed in that course.) The name of Hunt is properly given to it, because of its continual motion up and B 2 down

Now the Treble must be hunted up over the Second and Third,
which is to be done, by making a
Change between the Treble, and
each of those two Bells in order;
therefore first I remove the Treble up over the Second, into the
seconds place, by making a Change
between the Treble and Second,

The Treble being removed up over the Second, it must next be removed up over the Third, as in this Change.

23 I

Here you may observe, that if the Hunt had been hunted down without an Extrem Change first made, those Changes in hunting it down, would have been the same with those that were

made in bunting it up.

The Extream Change being made, the Treble must be hunted down again before the Bells thus. ______ | 312

132

The Treble being now hunted down, the next is to be an Extream Change.

which is the last Change of the six.

The other way to Ring the fix Changes, is, to make the Tenor the Hunt, which being behind already, it

The Plain Changes on four Bells.

On four Bells, there are Twenty four feweral Changes, in Ringing of which, there is one Bell called the Hunt, and the other three are Extream Bells; the Hunt moves, and hunts up and down continually, and lies but once in one place, except only when it comes before or behind the Bells, at which time it lies there twice together; it has the fame course here, as in the fix Changes before

The Treble must now be hunted up behind the Bells, where it is to lie twice together, and then to hunt down before them, where it must lie twice, and then hunt up again as before. The Hunt is alwayes one of the two Bells which makes every Change, except only when it comes before or behind the Bells, and it moves only over one Bell at a time; 'tis to be hunted up after this manner.

The Treble being hunted up behind the Bells, as appears by the last Changes, the next is to be an Extream Change between the two farthest Extream Bells from the Hunt,

Theic

3142

These two wayes in Ringing the Twenty-four, differs only in making the Extream Changes, one whereof is to make them between the two farthest Extream Bells from the Hunt, and the other to make them between the two nearest Bells to it.

The Twenty four Changes are to be Rang two wayes more in hunting down the Treble; one way, is to make the Extreams between the two farthest Bells from the Hunt; and the other, is to make them between the two nearest, as before. A short Example I will set down, the Bells stand thus.— | 1234

1234 The Treble should now be 1243 bunted down, but it being al-2143 ready before the Bells, info-2413 much that it can be removed 243I no lower; therefore the first 4231 must be an Extream Change, 4213 either between the two nea-4123 rest, or two farthest Bells from 1423 the Hunt at pleasure; the Ex-1432 tream being made, the Trebie 4132 is to hunt up, and so to the 4312 end of the Peal, in the fame 4321 course as before. 342I In hunting the Second, Third, 3412

or Fourth, there is to be observed the same course, as in hunting the Treble: A short Example I will set down, in hunting the Third up, and making the Extream Changes between the two farthest Bells from it. ______ 1234

the fourth; the Hunt being up, I make an extream between the 2134 treble and second, and then bunt down the third again, as in these changes, which course is to be observed to the end of the Peal.

Thave infifted the longer upon the directions to the Twenty four changes, because it is the ground and method in Ringing all plain changes; and by understanding this aright, the Learner will more easily apprehend the course of all plain and single changes whatsoever.

The Twenty-four plain changes are to be Rang fixteen several wayes; in hunting one Bell, it is to be Rang four ways; that is, two wayes in hunting it up, and the other two wayes in hunting it down, (as appears in my directions before in hunting the trebles:) so that in hunting the 4 Bells, 'tis to be Rang 4 times 4 wayes, which makes 16, some of which I have here set down.

Treble

Treble Hunt up, Extream between the 2 farthest Bells from it.	Second up, ex- tream between the 2 nearest to it.	Fourth down, Extream be- tween the two farthest Bells from it.

3142 4231	2143 3142	1342 4231
13242431	2413 3124	1324 4213
1342 2413	4213 3214	3124 2413
3142 2143	4123 2314	3142 2143
3412 1243	4132 2134	3412 2134
3421 1234	4312 1234	4312 1234
4321	4321	4321

Some persons do observe to Ring the Twenty-four changes with a whole Hunt, and half Hunt; but that is an impersect course; for there cannot be one half hunt only, but there will unavoidably be three half Hunts in one and the same Twenty-four; therefore I have set down the other way to ring it, by observing a hunt, and three extream Bells, which course is much more easie and true.

The Art of Ringing.

In the Twenty four Changes are contained the fix Changes; the three Extream Bells in the Twenty four, makes the fix Changes in course, every extream change being one of the fix, and the Hunt hunting through each of the fix Changes, makes Twenty-four: For Example, take the three Extream Bells in the first Twenty-four set down before, which are 234, and let down the fix Changes on them, thus .-

Now take the first Change, which is 234, let the Treble before it, and hunt it through, thus,

1234. The Treble being 2134 hunted up behinde, 2314 take the next Change 2341 of the fix, which is 324, set it directly under the First, and

through it, thus. And so take each of the other six Changes, and hunt the Treble through them, it will make Twenty-

hunt the Treble down

four.

334

432 423

243

234

3241

3214

3124 1324

I will here insert two or three old Peals on five Bells, which (though rejected in these dayes, yet) in former times were much in use, which for Antiquity sake. I here set down. And first,

The Twenty all over.

This Peal is to be Rang, by hunt 23451 ing the Bells down beginning 32451 with the Tenor next the fourth, 34251 and so the third, second, and tre-ble, which will bring the Bells 43512 round in course as before.

16 The Art of Ringing.

In this Peal, the Fifth and Fourth are both whole Hunts, each of which does hunt down before the Bells by turns, and lies there twice together and then bunts up again: The 1,2 and 3 goes the fix changes, one of which is made every time, either of the whole Hunts lies before the Bells, as in the following Changes, where the fifth hunts down the first; and lying before the Bells, there is a change made between the 1 & 2, which is one of the fix changes; and then the fifth hunts up again into its place, and the fourth hunts down, which lying before the Bells, there is another of the fix changes made between the 1 and 3, and then the fourth hunts up again, and the fifth hunts down next; in which course it continues to the end of the Peal, each of the whole Hunts lying but twice at one time before the Bells, as in these following changes.

The Plain Changes on five Bells.

There are Six-score Changes to be Rang on five Bells, which are to be Rang, by observing a whole Hunt, a half Hunt, and three Extream Bells; the course of the whole Hunt, is the same with the Hunt in the Twentyfour Changes, and hunts up and down in the same manner. The half Hunt moves once, that is, over one Bell every time, the whole Hunt comes before and behind the Bells; but when the half Hent is removed either before or behind the Extream Bells, then there is an Extream Change to be made. For Example, I make the Treble the whole Hunt, and hunt it up; and the Second the half Hunt, and half hunt it up, making every Extream Change between the two farthest Extream Bells from the half Hunt; the Extream Bells are the Third, Fourth, Fifth: Now observe, that whereas in the Twenty-four Changes, an Extream Change was alwayes made, when the whole Hunt came before or behind the Bells, in these Six-fcore Changes e

Bells ;

The Art of Langing.	19
Changes an Extream is always made, when the half Hunt co	s to be
fore or behind the Extream Bell	
the Treble is to be hunted up, as	
Changes.	12345
The whole Hunt being hunt-	21345
ed up, the Second, which is the	23145
half Hunt, must be hunted	23415
up over one Bell, as in this	
Change	32451
The half Hunt being re-	
moved up over one Bell, the	
whole Hunt must be hunted	
down again, as in these Chan-	
ges.	32415
The whole Hunt being bunt-	32145
ed down, the helf Hunt is	
to be removed up over the	
Fourth , which is the next Bell	
	13429
The whole Hunt is to bunt	
up as before.	
Now the half Hunt is to	24125
be hunted up over the Fifth,	
which is the next Bell to it,	24251
thus	24521
Here the Second, which is	
the half Hunt, is removed	
quite up behind the Extream	Relle

C 2

Bells; yet the Extreme Change is not to be made, until the whole Hunt has removed down through the Bells, as in these Changes.—

And it is a constant Rule, that whensoever the half Hunt has removed up behind the Extream Bells, or down-before them, the whole Hunt must bunt through the Bells , before the Extream Change is made, as in the last Change but four, which is 3,4,5,2,1. the Second being the balf Hunt, is removed up behind the 3,4, and 5. which are the Extream Bells; and then the whole Hunt being behind, hunts immediately down; and now the Extrem Change is to be made between the 3, and 4. which are the two farthest Extream Bells from the half Hunt, as in this Change .--

The Extream being made, the whole Hunt and half

34512

Hunt

The Art of Ringing.	21
Hunt are to remove again; and first the whole Hunt	
must be hunted up.	41352
Now the half Hunt is to	43152
be bunted down under one	43521
The half Hunt being re-	43251
moved, the whole Hunt is	in Mosel
The half Hunt is to be	43215
removed down under an-	41325
Change as in this	14325
Now I hunt up the Tre-	von qu
ole	41235
The Treble being hunted up, I hunt down the Second	42315
before the Extream Bells	24351
Now I hant down the Treble again, and then make	
the Extream Change, as in	20.1
The last is the Extream	24315
Change, which is made be-	21435
tween the Third and Fifth;	12435
and this course is to be ob-	12453
ferved to the end of the Six -	[core

fcoreChanges, which is fet down at large at the end of the directions to this Peal.

Another short Example I will insert, which is Second down, and Fourth up, (for that is the common Phrase amongst Ringers) whereby 'tis alwayes to be observed, that the first Bell which is named, is the whole Hunt, and the second that is named, is the balf Hunt, as herein you may perceive; where Second down, is meant, that the Second Bell is the whole Hunt, and to hunt down the first Change; and the Fourth Bell is the half Hunt, and to half bunt up, that is, to move up towards the hindmost Bell the first time it moves at the beginning of the Peal; which are only directions in making the first Changes, for one whole Hunt and half Hunt may be hunted several wayes, either up or down at pleasure. First, I hant down the Second ..

The Second being hunted 21345 down, the Fourth, which is the half Hunt, must be removed up over one Bell, thus.

The half Hant being removed, I must hant up the

Second,

The Art of Ringing. 23

Second, as in these Changes .- 12354 Now the Fourth, which 13254 is the half Hunt, being be 13524 hind the Extream Bells, the 13542 next is to be an Extream 31542 Change, which may be made 31524 either between the two far- 31254 thest Bells from the half 32154. Hunt, or the two nearest to 23154 it; and after the Extream 23145 Change is made, the whole Hunt and half Hunt must be hunted as before. These Six-Score Changes of Second and Fourth, I have fet down at large, at the end of my directions to these Changes on

five Bells.

In every Six-score, the Extream Changes may be made either between the two farthest Extream Bells from the half Hunt, or between the two nearest to it, observing to make all the Extreams in one Six score alike; that is, if you make the first Extream Change between the two farthest Extream Bells from the half Hunt, you must make all the following Extreams in the same Six fore between the two farthell Ex24 The Art of Ringing.

tream Bells also; or if you make the first Extream in any Six-score between the two nearest to the balf Hunt, you must make all the following Extreams in the same Six-score between the two nearest also.

The Six-score plain and single Changes, are to be Rang Eight-score several wayes; for although there are but Six-score several Changes on five Bells, yet by altering the whole Hunt, the half Hunt, and Extreams, the course of the Changes are so altered, that the same Changes doe not come all along together in any two of those Eight-score

wayes.

With one whole Hant, and half Hunt, the Six-score Changes are to be Rang, or set down eight several wayes; one way, is by hunting the whole Hunt, and half Hunt both up; the second way, is by hunting the whole Hunt and half Hunt both down; the third way, is in hunting the whole Hunt up, and the half Hunt down; the fourth way, is by hunting the whole Hunt down, and the half Hunt up; each of these four wayes is to be Rang two wayes more; one is, in making the Extreams between the

the two farchest Extream Bells from the half Hunt, and the other way is in making them between the two nearest; for Example, in making the treble the whole Hunt, and second the half Hunt, the Six-score are to be Rang eight several wayes (viz.)

n

Treble and secondy Extream Changes to be made between the two nearest Extream Bells to the half Hunt, which is called Mediums.

On five Bells there are 20 Hunts, (i.e.) a whole Hunt, and half Hunt twenty times, and not one; and the same whole Hunt, and half Hunt twice, as appears

26 The Art of Ringing.

appears by the following Figures, where they stand two and two together; one of which is the whole Hunt, and the other the half Hunt: for Example, the

2 highest Figures are 1.2 where the treble is the whole Hunt, and the second the half Hunt. The two next Figures are 1.3 where the treble is the whole Hunt, and the third the half Hunt; and likewise the two last, or lowest Figures, are 5.4 the fifth is the whole Hunt, and the fourth the half Hunt; and so of all the rest, the first Figure representing the whole Hunt, and the next to it the half Hunt.

Hunts, and every one making eight Six-scores (as in the Example of treble and second) that is twenty (which are the number of Hunts;) multiplied by eight (which are the number of Six-scores made by each Hunt) does produce Eightscore several wayes to Ring the Six-score Changes.

l In

1.5

4.1

In the Six-score Changes are comprehended the Twenty-four, and the Six Changes: The Twenty-four Changes are made between the half Hunt, and the three Extream Bells; and the Six are made between the Extream Bells alone: The half Hunt in the Six score, is the whole Hunt in the Twenty-four; and there is one Change in the Twenty-four made every time the whole Hunt comes before and behind the Bells; and one Change in the Six made every Extream: So that the Six-score rightly understood, is nothing else but hunting the half Hunt through every Change of the Six, which makes Twenty-four Changes; and then hunting the whole Hunt through each Change of the Twenty-four, which makes Six-score; for instance, in the first Six-score before fet down, where the treble is the whole Hunt, the fecond the half Hunt, and the 345 the Extream Bells.

The Art of Ringing.

I take the Extream Bells, and fet down the fix Changes on them	
thus.	345
Now I take the first of the fix,	435
which is 345, and set the second	453
(which was the half Hunt in the	543
Six-score) to it, and hunt it up	534
behind thus.	354
Now I take the second 3245	345
Change of the fix, which is 3425	ידנ
435, and set it directly un-3452	
don a se and the Coond	
der 345, and the second	Ì
Bell to it, and hunt it down	
thus4352	
The second being hunted 4325	
through the Change, I take 4235	
the third Change in the fix, 2435	1
which is 453, and hunt the	
second Bell through it, as	
before 2453	
And in the same course, 4253	
the second being hunted 4523	
the record being numer 4,23	
through each Change of the 4532	
fix, will make Twenty-four,	
one Change of the fix, hunt-	
ing the second Bell through	i
it, makes four Changes; so	
that the fix Changes by	
hunting the second through	

each

each of them, will make fix times four Changes (i.e.) Twenty-four. And now hunt the Treble through each of the Twenty-four Changes, and 'twill make Six-score; the first of the Twenty-four is 2345, take the Treble, and hunt it

Now take the next Change of 21345 the Twenty-four, which is 3245, 23145 fet it under the other Change, 23415 and hunt the Treble through it 2345 I 32451

And in the same manner, 32415 hunting the Treble through each 32145 Change of the Twenty-four, will 31245 produce Twenty-four times five 1 3245 Changes, which makes Six-score; one Change of the Twenty-four (in hunting the Treble through it) makes five Changes.

In every Six-score on 5 Bells, there are 6 Extream Changes, there being twenty Changes from one Extream to another.

It would be an endless undertaking to fet down all these Peals at large, but for the convenience of the Learner, I have fet down some part of several of them, which may with ease be prickt out to the end of eachPeal, as the Learner pleafes. Note,

Note, That in the following Peals there is a Line drawn at each Extream Change between the Figures, to shew where the Extreams are made; as in the next Peal there is a Line drawn between the Figures just 20 Changes from the beginning of the Peal, the Change next after the Line is the Extream Change, which is 14352, and so of the rest; the Change next following each Line is the Extream.

Treble and second both up, Extream between the two farthest Extream Bells from the half Hunt.

The Changes on fix Bells.

On fix Bells there are Seven-hundred and twenty Changes to be made; but there are Peals of Six-score and Twelvescore Changes to be Rang on them. The Six-score Changes are to be made, by observing a whole Hunt and half Hunt, which are to be hunted in the same course, as in the Six-score on five Bells, and the Extream Changes to be made by the same Rule as they were on five Bells. The only difference between the Six-score on fix Bells, and those on five, are this; whereas on five there are but three Extream Bells, on fix there are four Extream Bells. And on five Bells, there are fix Extream Changes in every Six-score; but on fix, there are but four Extream Changes. And moreover, whereas in every Six-score on fiveBells, the Changes were the same in each, although altered in course; but the Changes on fix Bells are not the same in each, for several Six-scores has several Changes, one Six-score having many Changes which another has nor, as in this Peal, treble and second bothup; which is,

There are other Peals to be Rang on fix Bells, as Six-scores on the five smallest, the tenor lying behind all the way. Treble and second, or treble and sitth, with the tenor lying behind, makes very good Musick: Of which Peals I need not give you any Example, these Six-scores being the same with those on five Bells set down before.

The Twelve-score Changes being only part of the Seven-hundred and twenty, and consequently the course of each being one and the same, I will therefore shew the course and method of the Seven-hundred and twenty, wherein the Twelve-score Changes are also included.

In Ringing the Seven-hundred and Twenty, there is a whole Hunt, a half Hunt, a quarter Hunt, and three Extream Bells; the whole Hunt and half Hunt does hunt in the same course and method, as they did in the Six-score on five Bells, and in the last Six-score; and the quarter Hunt removes in the same course under the half Hunt, as the half Hunt does under the whole Hunt: for instance, when the whole Hunt is hunted either before or behind the Bells, then

D 3

the half Hunt removes over one Bell; and when the half Hunt is removed before or behind the quarter Hunt and Extream Bells (at which time in a Six-feore the Extream is made) then the quarter Hunt removes over one Bell, in the same course as the half hut moves, when the whole Hunt is before or behind. An Example I will set down, which is 1.2 and 3 all up, that is to say, treble the whole Hunt, and to hunt up, second the half Hunt, and to half hunt up, and third the quarter Hunt, and to quarter hunt up 4,5 and 6 are Extream Bells; there is alwayes an Extream Change to be made, when the quarter Hunt comes be-fore or behind the Extream Bells, there are two wayes to make the Extreams, which are the same here, as in the Sixscore on five, and made by the same Rule, I will here make it between the two farthest Extream Bells from the quarter Hunt. Now the treble and fecond being the whole Hunt and half Hunt, must be hunted in the same course, as in the Six-score on five Bells, after this manner.

Th	be Art of	Ringing	. 39

45.6213	421563	

It is to be observed for a constant Rule, that when the quarter Hunt removes either quite up behind the Extream Bells, or down before them, the whole Hunt and half Hunt must hunt through the Bells before the Extream Change is to be made, as appears by the last Changes.

The Extream Change is now to be made between the 4 and 5, being the two farthest Extream Bells from the third, which is the quarter Hunt, thus.

The Extream being made, the whole Hunt, half Hunt, and quarter Hunt must be hunted as before; and first the whole Hunt and half Hunt are to be hunted up, as in these Changes.

The whole Hunt and half Hunt being hunted up, the quarter Hunt must hunt down under the sixth, which is the next Bell to it, and then the whole Hunt and half Hunt must hunt down again, as in the Changes following.

543621	541326	514236	254361

The quarter Hunt being before the Extream Bells, the Extream Change is to be made:

Here are just Twelve-score Changes already set down, and the Bells may either be brought round, and so make an end at the Twelve-score, or else proceed forward to the end of the Seven hundred and twenty. If the Bells are not brought round here, they cannot come round, until the Seven-hundred and twenty Changes are all made, and then they come round in course. To bring the Bells round at the end of these Twelve-

Twelve-score Changes, the Extream is to be made between the 5 and 4, which were the two Bells that made the last Extream Change, and brings them round in their right places again, as appears by these Figures 123456.

There are but two Extream Changes in every Twelvz-score, wherein 'tis constantly observed, that the last Extream Change is to be made between those two Bells which made the first Extream, otherwise the Bells would not come round at the end of the Twelve-score.

Here I have somewhat deviated from my directions before, in making the Extream Changes; for in the last Change, which is 123456, I made the Extream between the two nearest Extream Bells to the quarter Hunt; but the Twelvescore Changes are an imperfect Peal, being only a third part of the Changes which are to be made on fix Bells, and therefore not to be brought round, unless the last Extream Change is made out of course. To have proceeded forward in the 720, the last Extream should have been made between the 4 and 6, which are the two farthest Extream Bells from the quarter Hunt, the Change next before the

the Extream, is 123546; now the 4 and 6 making an Extream Change, the Bells fland thus, 123564; the Extream being made, the whole hunt, half hunt, and quarter hunt are to be hunted as before, and the Extream Changes to be made between the two farthelt Extream Bells from the quarter bunt, which course will bring the Bells round in their right places at the end of the 720. In every 720, there are fix Extream Changes, there being Six-score Changes between each. The Twelve-score Changes are to be Rang with any whole hunt, half hunt, and quarter hunt, observing to make the last Extream Change between those two Bells which made the first.

The 720 plain Changes are to be rang or set down One thousand sour hundred and forty several wayes, by altering the whole hunt, half hunt, quarter hunt, and Extream Bells (but the course of each is the same with that which is before set down) which I thus demonstrate. On 6 Bells, there are 120 several hunts, (viz.) a whole hunt, half hunt, and quarter hunt Six-score several times, and not one and the same whole hunt, half hunt, and quarter hunt twice, as appears by these Figures.

A Reimond	Tarter.	-	-	-		

These Figures stand three and three together, each three represents the three Hunts; that is, the first is the whole Hunt, the second Figure the half Hunt, and the third the quarter Hunt; for Example, the first three are 1 2 3, the treable is the whole Hunt, the second the half Hunt, and the third the quarter

Hunt :

The next three Figures are 124, there the treble is the whole Hunt, the second the half Hunr, and the fourth the quarter Hunt; and the last three Figures are 654, where the fixth is the whole Hunt, the fifth the half Hunt, and the fourth the quarter Hunt, and so of all the rest.

With one whole Hunt, half Hunt, and quarter Hunt, the Seven-hundred and twenty Changes are to be Rang, or fet down twelve several wayes; for instance, take the first three Hunts in these Figures, which are 123, where the treble is the whole Hunt, the second the half Hunt, and the third the quarter Hunt, which may be hunted fix several wayes, as followeth.

up, third down-Treble up, second treble down, second

Treble, second and Teach of these are to third, all up-_ | be Rang two wayes, Treble and second sone is to make the Extremms between the two farthest Exand third down tream Bells from the Treble, second and quarter Hunt, and third, all down- the other way is to Treble and second make the Extream down, third up- between the two next Bells to the and third up _ quarter Hunt.

By treble, second and tnird all up, is meant, that the treble is the whole hunt, and to hunt up the first Change at the beginning of the Peal; the second is the half hunt, and to half hunt up; that is, to move up towards the hindmost Bells the first time it moves at the beginning of the Peal; and the third is the quarter hunt, and to move likewise toward the hindmost Bells the first time it removes. And by treble and second up, and third down, is meant, that the treble and second are to move up towards the hindmost Bell, the first time each removes at the beginning of the Peal; and the third being the quarter hunt, is to move down the first time, which are only directions for moving the hunts at first, because they may be hunted either up or down.

The whole hunt which is the treble, should now be hunted down; but it being already before the Bells, insomuch that it can be removed no lower; I should therefore remove the half hunt

down,

dewn, but that being also down as low as it can go, I should move the quarter hunt; and that being also down before the Extream Bells, I can move it no lower, unless I should move it down under the second, which is the half hunt, which must not be done; for when the quarter bunt is down next before the Extream Bell, it must be removed no lower; and when it is up next behind the Extream Bell, it is to be removed up no higher; therefore it being now before the Extream Bell, the Extream Change is to be made the first of all; and when that is done, the treble, second and third must be hunted up in course. Or if you make treble and second down, and third up, then the first Change is to be made, by moving the quarter Hunt up over one Bell. And again, if you make Treble and Tenor both up, and Third down, first hunt up the Treble, and then the Tenor, which is the half Hunt, thould be moved up; but it being already behin , the quarter Hunt, which is the Third, mult move under one Rell, and then the whole Hunt and half are to hunt in course after each other: Many Examples of this Nature I could fet down,

down, which for brevity sake I o-

I might demonstrate how the 720 are to be Rang twelve wayes, with each of the Six-score Hunts, as I did that of tre-ble, second and third; but I think that altogether needless, since that Example makes it most plain and easie to be understood: But I will give a general Rule for hunting any whole Hunt, half Hunt, and quarter Hunt, so as to produce six several wayes to Ring the 720 Changes, which is this:

Whole Hunt, half Hunt, and quarter Hunt, all hunted up.

Whole Hunt, and half Hunt hunted up, and quarter Hunt down.

Whole Hunt hunted up, half Hunt and quarter Hunt down.

Whole Hunt, half Hunt, and quarter Hunt hunted down.

Whole Hunt and half Hunt hunted down, and quarter Hunt up.

Whole Hunt hunted down, half Hunt and quarter Hunt hunted up.

Which is a general Rule to Ring the 720 fix wayes on any one of the Sixfcore fcore Hunts; each of which fix wayes, may be Rang two wayes more, by altering the Extream Changes, one of which is to make the Extream Changes between the two next Extream Bells to the quarter Hunt, and the other way is to make the Extreams between the two farthest Extream Bells from it.

The 720 Changes are to be Rang 12 wayes with one whole Hunt, halt Hunt, and quarter Hunt; so that with the Six-score Hunts, it is to be Rang Six score times twelve wayes, which makes One thousand sour hundred and sorty several wayes to Ring this 720 plain Changes.

In the 720, the half Hunt, the quar-

p,

nd

on,

the

Six-

910

In the 720, the half Hunt, the quarter Hunt, and the three Extream Bells, makes the Six-score Changes on 5 Bells in a perfect course, the half Hunt and quarter hunt in the 720, being the whole Hunt and half Hunt in the Six-score; for Example, take the 23456, and set down the Six-score Changes on them, making the second the whole hunt, and the third the half hunt; which when you have set down, then take the Treble, and hunt it through every Change of that Six-score and it will make 720 Changes, the same with those which I have

E 2

fet

fet down before. The Twenty-four Changes on four Bells, and the fix changes on three Bells, have also a perfect course in the 720, in the same manner as I told you they had in the Six-scores on five Bells. There is alwayes one change in the Six-score made every time the whole hunt comes before or behind the bells, which is every fixth change; and there's one change of the Twentyfour made, every time the whole hunt and half hunt comes before or behind the bells, which is once in thirty changes; and one change of the fix made every extream, that is once in fix-score changes. You may take the fix-score changes on fivebells, treble the whole, and second the half hunt, before set down; and hunt the fixth bell through every change of that fix-score, which will make the 720 changes; Tenor the whole hunt, Treble the half hunt, and Second the quarter hunt.

This is not material for a Learner to know, it being only for the instructions of these that know how to Ring it, but yet are ignorant of the true grounds thereof; therefore I have dissected it, and shewed the grounds of each part of it.

In this place, I will add a word or two to those that practise to Ring the Changes.

Hey that Ring the extream bells in the Twenty-four changes, must mind and observe the motion of the hunt, that they may the better know when to make the extream changes; and likewise in a six-score on five bells, he that Rings the half hunt, must observe the motion of the whole hunt; and they that Ring the extream bells, must observe the motions both of the whole hunt, and half hunt, that they may know when the half hunt is to move, and also when to make the extream changes; or else he that does Ring the half hunt, may give notice of the extream changes (by faying Extream) the change next before the extream is to be made. The same is to be observed in the changes on six bells. The whole hunt is the easiest bell to Ring in any changes, and the half hunt is more plain and easie to Ring, than an All changes are to be extream bell. Rang either by walking them (as the term

h

e

d

54 The Art of Ringing. term is) or else Whole-pulls, or Halfpulls. By walking them, is meant, that the bells go round, four, fix, eight times, or more, in one change, which is commonly used by young Practifers; it may be sometimes on five bells, Ringing the Twenty-four changes on the treble, second, third, and fourth, the fifth bell ficking behind every change; and many other changes of the like nature may be practifed this way by young Ringers. Whole-pulls, is to Ring two Rounds in one change, that is, Foreftroke and Back-ftroke, and in a change; fo that every time you pull down the bells at Sally, you make a new change differing from that at the Back-stroke next before; this Whole-pulls was altogether practifed in former time, but of late there is a more quick and ready way practifed, called Half-pulls, which is—only once round in a change, that is, one change made at the Fore-stroke, and another at the Back-Aroke, which way is now altogether in use (unless it be at

fome great bells, which are too weighty to be managed up so high a Compass at the Back-stroke, as Half-pulls requires) it being now a common thing in London In Ringing Half-pulls, some Peals do cut Compass, that is—the whole hunt comes to lead at the Back-stroke, to remedy which, make the first change of

the Peal at the Back-stroke.

By these following Rules, you shall know what Peals do cut Compass, and what not (i.e.) of plain and single

changes. On fix Bells,

In hunting either the treble, the third, or the fifth bells down, cuts Compais; hunting them up, does not cut Com-

pals.

In hunting the second, fourth, or fixth bells up, cuts Compass; but hunting them down, does not cut Compass.

These

These Rules (leaving out the Tennor) serves for five bells; and leaving out the fifth and Tenor, they serve for four bells.

The

Twelve-Score LONG-Hunts:

Or the

ESQUIRE'S Twelve-score.

This Peal is to be Rang on fix bells, having two whole hunts, and one half hunt; the common way of Ringing, it is to make the fifth and Tenor the whole hunts, and the Treble the half hunt. The Tenor and fifth does each hunt down by turns, and when either of them comes down before the bells, it leads twice, and then hunts up again.

The Treble, second, third, and fourth, makes the Twenty-sour changes, one of which is made every time either of the whole hunts leads: For instance, the Tenor is first to be hunt-

	3 11
ed down, thus	123456
The tenor being hunted down,	123465
and lying before the bells,	123645
there is one change in the	126345
Twenty-four now to be made	162345
between treble and second,	612345
thus.	621345
The tener is to be hunted up	261345
into its place, and the fifth	216345
bunts down.	213645
	213465
	213456
The fifth being now before the	213546
bells, there is another change	215346
in the Twenty-four to be	251346
made between the treble and	521346
third, as in this change.	523146
The fifth is now to hunt up; and	253146
the tenor to hunt down a-	235146
gain, in which course they	231546
continue to the end of the	231456
Peal, observing to make an	231465
extream change, when the	231645
treble (which is the hunt	
in the Twenty-four) comes	
before or behind the ex-	
tream bells.	

This Peal may be Rang, by making the Twenty-four changes Doubles and Singles,.

Singles, in the place of the Twentyfour plain Changes, and many other wayes, which I leave to the Learner to practife.

The Variety of Changes on any Number of Bells.

He changes on bells do multiply infinitely. On two bells there are two changes. On three bells are three times as many changes as there are on two; that is __three times two changes, which makes fix. On four bells there are four times as many changes as on three; that is-four times fix changes, which makes Twenty-four. five bells there are five times as many changes as there are on four bells; that is-five times Twenty-four changes, which makes Six-score. On fix bells are fix times as many changes as there are on five; that is-fix times Six-score changes, which makes Seven-hundred and twenty: And in the same manner, by increasing the number of bells, they multiply innumerably, as in the Table of Figures next following; where each of the

the Figures in the Column of the left hand, standing directly under one another (which are 1.2.3.4.5.6.7.8.9. 10:11.12.) do represent the number of bells; and the Figures going along towards the right hand, directly from each of those twelve Figures, are the number of changes to be rung on that number of bells which the Figure represents: For Example, the uppermost Figure on the left hand is 2, which stands for two bells; and the Figure next to it on the right hand is also 2, which stands for two changes; that is to say, on two bells there are two changes. The next Figure below in the left Column is 3, which stands for three Bells; and the Figure next to it on the right hand is 6, which stands for fix changes; that is -on three bells are fix changes, and so of the rest as follows.

•		
-	•	•
m	£.	а
_	•	-

bells	changes.
2	2
3	6
4	24
5	120
6	720
7	5040
8	40320
9	362880
10	3628800
11	39916800
12	479001600

The lowest of these figures are feventy nine Millions, one thousand fix hundred, which are all the changes that can be made on twelve bells : And supposing that twelve men should take 12 bells with intent to ring the changes on them, they would be Seventy five Years, ten Months, one Week and three Dayes in singing them, according to the proportion of ringing 720 changes in an hour; reckoning 24 hours to the day, and 365 dayes in the Year.

Having

Having given Directions for all forts of plain and single Changes, I will now proceed to Cross-Peals, and first to Doubles and Singles on four Bells.

Doubles and Singles on four Bells.

N four bells there are 24 changes to be made Doubles and Singles, wherein are twelve double changes, and 1 2 fingle; next to every double change, there is a fingle; so that 2 double changes do not come together in any place throughout the Peal, neither does two fingle changes at any time come together; but one change is double, and the next is fingle, to the end of the Peal. Every double change is made between the four bells; that is—there are two changes made at one time, between the bells in treble and seconds places, and the bells in third and fourths places. Every fingle change is made between the two bells in the middle (i.e.) in feconds and thirds places; excepting the extream changes, which are fingle, and made between the two farthest extream bells from the Hunt. An Example I here Now the hunt is before the bells, there is an extream change made between the two farthest bells from it, which are the 2 and 4, thus.

The extream change being made, the bells are to move, as before, observing to make an extream change every time the whole hunt

comes before the bells.

In this last Twenty four, the treble is hunted up at the beginning; it may be rang by hunting it down, which is to be done, by making the first a single change, and then hunt it up as before.

With one hunt this Peal may be rang six mayes (viz.) three wayes in hunting it up at the beginning of each Peal, and the other three wayes by hunting it down; the three wayes in hunting it up, differs only in making the extream changes; in one of the three wayes you must make an extream change every time the hunt comes before the bells to lead, as in the Twenty-four changes before set down. Another way is to make an extream every time the hunt comes behind. And the third way, is to make an extream every time the hunt comes before and behind the bells. The three wayes in hunting it down, are to be rang by making the extream changes, as in the three wayes before; in hunting one bell, there are six wayes to ring this Peal; therefore with the four bells (in making each of them to hunt) there are four times six wayes to ring it, which makes Twenty-four several wayes. And for the benefit of the Learner, I have set down certain Rules, shewing how to begin any of the aforesaid Peals (viz.)

In hunting either the treble or third up, the first change is double; but in hunting either of them down, the first is single.

In hunting the second or the fourth up, the first change is single; but in hunting either of them down, the first change in each Peal must be double.

Doubles and Singles on five Bells.

Here is a Peal to be rang on five bells, called Doubles and Singles, wherein are Six-score several changes, fixty of which are double changes, and fixty are fingle; the double and fingle changes are so intermixt, that two double changes does not at any time come together in the Six-score; neither are two fingle changes made next to each other in any part of this Peal, but one change is double, and the next fingle, in which course they are made to the end. Every double change is made between the four foremost bells (i.e.) in treble, fecond, third, and fourth places. When the whole hunt is hunting up, each fingle change is made between the whole hunt, and the next bell above it. In hunting down the fingle changes are made between the whole hunt, and the next bellbelow it, the whole hunt being alwayes

one of the two bells which makes every fingle change, except only when it leads, and then the fingle change is made in third and fourths places; but the extream is also a fingle change, and made (when the whole hunt leads) between the two farthest extream bells from the half hunt; the half hunt is to lie either before or behind the extream bells, when the extream changes are made, of which I shall shew you more anon.

In this Peal there is a whole hunt, a half hunt, and three extream Bells; the whole hunt in a direct course does hunt up and down, and lies twice before, and twice behind all the way; every other bell leads twice together throughout the

Peal.

And when the whole hunt leaves the thirds place, hunting up, then every bell that comes into second and thirds places, does lie in each of these places twice together, until the whole hunt comes down again into thirds place, at which time the bell in fourths place lies there twice, and then makes a dodge with the bell in thirds place (unless an extream change is to be made) and so removes directly down before the bells. And that

that bell which comes into the tenors place (when the whole hunt leaves that place hunting down) lies fill there,until the whole hunt removes up into that place again, except only when the extream is made behind, and then the bell in fourths place moves into tenors place, and lies there until the whole

hunt moves up into that place.

With one whole hunt, and half hunt, this Peal may be rang six wayes, in three of which the whole hunt is to be hunted up at the beginning of each Peal, which three ways differs only in making the extream changes. One way, is to make an extream change every time the half bunt comes before the extream bells, as in the following Six-Score. The Second way, is to make an extream change every time the half hunt comes behind the extream bells. And the third way, is to make an extream every time, the half hunt comes before and behind the extream bells. this last way there are six extreams in each Peal, but in the other two ways there are but three extreams in each Peal.

The three wayes aforesaid, are to be rang, by hunting up the whole hunt; but it may be rang three wayes more, in hunt-

67

ing down the same whole hunt, in which three wayes the extreams are to be made, as I shewed you before. The whole hunt is alwayes to lead when every extream

change is made.

This Peal I have fet down at large, making the treble the whole hunt, the fecond the half hunt; and an extream change every time the half hunt comes before the extream bells, as in the following changes. I have drawn a Line between the figures at the extream changes, that next below the Line is the extream.

32 G 1 1		L a	This

This Peal may be rang Six-score several wayes; there being twenty hunts on five bells (that is—a whole hunt, and half hunt twenty times on five bells, and not one and the same whole hunt and half hunt twice, as I shewed more at large in the plain changes on five bells before set down) and with each hunt, that is, with one whole hunt and half hunt, it may be rang six wayes; so that multiply twenty, (which are the number of hunts) by six, (which are the number of Peals to be rang on each hunt) and it will produce Six-score several wayes to ring it.

It may be prick't, or rang Six-score several wayes more, by making the extream changes when the whole hunt lies behind the bells, but those wayes are never practised; neither do I think it material to say any thing more of them in this place, having only inserted this, to shew the great variety there is in this Peal. It being somewhat difficult to know the true way of beginning each Peal, I have therefore set down certain Rules, shewing how the first changes in

each are to be made.

In hunting the treble, the third, or the fifth bells up, the first change in each Peal is to be made double.

In hunting the treble down, the first change is single in third and fourths place, unless the half bunt lies so, as that the extremm is to be made.

In hunting the third or fifth down, the first change is to be made single, between the whole hunt, and the next bell below it.

In hunting up the second or fourth, the first change in each Peal is single, between the whole hunt, and the next bell above it.

In hunting down the second or fourth, the first change is to be made double.

Every double change in all the Peals of Doubles and Singles, is made between the four foremost bells; that is—in treble, second, third and fourths places.

Tendring's Six-score on five Bells.

IN this Peal are contained Six-score changes, which are Doubles and Singles, there being fixty double changes in it, and fixty fingle, which are so intermixt, that two double changes does not come together in any part of the Peal; neither are there 2 fingle changes at any

time made together, but one change is double, and the next to it is fingle; in which course the changes are all made to the end of the Peal. Every fingle change is made between the 2 hindmost bells. There is a whole hunt and half hunt in it. The observation in ringing it, is this: When the whole hunt lies before the bells, and is to hunt up, first it moves up into seconds place, where it lies twice; then into thirds place, where it lies also twice; then into the fourths place, where it lies once; and in the tenors place once: Then it makes a dodge with the bell in fourths place, after which it lies twice behind; then it moves down into fourths place, and makes a dodge with the bell in tenors place, and then moves down into thirds place, where it lies twice, and in the seconds place twice, ane then it leads four times; after which, it hunts again, as before. The course of the other four bells, are exactly the same with that of the whole hunt, in moving up and down, except only when the lob changes are made, and then they differ; but after the · Bobs are made, their course is the same as before; every bell lies four times together before the bells, and twice in the feconds conds place without any alteration. In this Peal are two forts of Bobs; one of which is called a double Bob, and the other a fingle Bob. The Rule for making the double Bob is this, when the whole hunt is hunting down, and lies in the seconds place, and the half hunt lies behind, then there's a double Bob; that is, two Bob-changes; one of which is made the next change, wherein the whole hunt moves down to lead; where having led four times, there is then another Bob-change to be made, in which the whole hunt moves up into the feconds place. The Rule for making the fingle Bob, is this, when the whole hunt has led four times, and the half hunt lies in thirds place; then the next change following is a fingle Bob, that is - one Bob-change, in which the whole hunt moves out of the trebles place up into the seconds place, every Bob is a double change, and made between the two first, and two last bells, the bell in thirds place lying still when each Bob is made, where it lies four times together, and then moves down; every time the whole hunt comes before the bells, there is either a fingle Bob, or a double Bob made.

F 4

72 The Art of Ringing.

At every double Bob, these two bells that do dodge behind at the first Bobchange, continues dodging until the whole hunt moves up, and parts them: And likewise at the single Bob, those 2 bells which do dodge behind at the Bobchange, continue dodging until the whole hunt moves up, and parts them, as in the following changes, where the treble is the whole hunt, the tenor the half hunt, and the first is a Bob-change, being supposed to be the second Bob-change of a double Bob.

This Peal was made out of Grandsire on five bells, the Bob changes in this, being the same with those in Grandsire, and made by the same Rule.

Paradox on five Bells.

His Peal of Paradox is to be rang I on five bells, wherein are Six-score changes, they are Doubles and Singles: that is one change double, and another fingle; in which course they are made to the end of the Peal. Every fingle change is made in second and thirds places, except only when the whole Hunt leads, and then tis made in third and fourths places; but the extream Changes are (also single) and made between the two farthest extream bells from the half Hunt; the whole Hunt lies before the bells, when every extream change is made. Every bell lies four times together before, and four times behind, except only when the extream changes are made behind. There is a whole Hunt, a half Hunt, and three extream bells: the course of the whole Hung is this, it being before the bells, first

74 The Art of Ringing.

first it moves up into the second and thirds places, then it makes a dodge with the bell in seconds place, and moves out of the thirds place up into fourths, where it lies alwayes twice, then moves up behind, where it lies four times, and then moves down into fourths place, where having lay twice, it hunts down into feconds place, and makes a dodge with the bell in thirds place, and then moves down before the bells, where having lay twice, it hunts as before; each of the other bells has the same course (in hunting up and down) as the whole Hunt until the whole Hunt leads, at which time every bell that comes into seconds place lies there twice together, unless the extream change is to be made in fecond and thirds places.

In this following Peal, the treble is the whole Hunt, and the second the half Hunt; the extream changes are made, when the half Hunt lies before the ex-

tream bells.

I have drawn a Line between the Figures at the extream changes, that next below each Line is the extream; the first extream is Forty changes from the

beginning.

This Peal is grounded on the Twentyfour changes Doubles and Singles on four bells. The half Hunt, and three extream bells in this Peal, makes the Twenty four changes in a perfect course. There are four changes made in the Twentyfour every time the whole Hunt leads, which coming before the bells fix times in the Six-score, and each time lying there four times together, makes six times four changes, which is Twenty four. 'Tis easily made out, if you take every change that is made when the whole Hunt is before the bells in the Six-Score before, and set the changes down by themselves (leaving out the treble) where you will find, that the second, third, fourth and fifth, make the Twenty-four changes Doubles and Singles, in a perfect course; second is the Hunt, and the extreams are made when the Hunt is before.

Paradox may be rang Six-score several wayes. With one whole Hunt, and half Hunt, it may be rang six wayes,

in three of which the whole Hunt is to be hunted up; and in the other three wayes it is to be hunted down, in which fix waves the extream changes are to be made by the same Rules, and in the same manner, as I shewed before in the Sixscore Doubles and Singles on five bells; so that with the twenty Hunts, it may be prick't or rang twenty times fix wayes, which makes Six-score.

This Peal may be prick't Six-score wayes more, by making the extreams when the whole Hunt lies behind the bells, but that being never practifed, I will fay no more of it. I have here fet down some general Rules for beginning the several Peals of Paradox by the former course (i.e.) in making the extreams when the wholeHunt is before the bells.

In hunting the treble up, the first change is double between the four first bells, thus.-____12345.21435

In hunting the treble down, the first change is single in third and fourths places (thus.—12345.12435) unless the half Hunt lies fo, that the extream may be made.

78 The Art of Ringing.

Second up, the first change is single in second and thirds places, thus.—12345.

Second down, the first change is double

between the four first bells.

Third up, the first change is double between the four first bells.

Third down, the first change is single

in second and thirds places.

Fourth up, the first change is double between the four hindmost bells, thm.— 12345.13254.

Fourth down, the first change is double

between the four first bells.

Fifth up, the first change is single in

second and thirds places.

Fifth down, the first change is double between the four hindmost bells.

If you observe these Rules aright, together with my former directions, you may with much ease prick down any Peal of Paradox.

Fohn Donno His Eoch 1686 HOENIX.

PHOENIX.On five Bells.

It, which are Doubles and Singles; the tenor is the whole Hunt, and the fourth the half Hunt. Every bell lies twice before, and four times behind; every fingle change is made in second and thirds places, and every bell that comes into fourths place, lies there twice together, until the tenor comes behind; at which time, the fourth lying in the seconds place, the next single change is made in third and fourths places; but the tenor lying behind, and the fourth in thirds place, then the two next sollowing single changes are in third and fourths places.

What you please. Doubles and Singles on 5 Bells.

E Very bell leads four times, and lies behind twice, except when the extream is made behind, and twice in the feconds place, except when the extream is before; and note, when the treble is before the fourth stroke, the single is in fecond and third, the next time the single is behind; but at other times, the single is in third and fourths places. When any bell leaves leading, the double change is on the two sirst, and two last, and the extreams are made by turns, first behind, then before, and so on to the end, for there are six extreams.

Reading Doubles. On five Bells.

The treble is a Hunt; and note when treble is in thirds place hunting up, the two foremost bells dodge until it comes into the same place hunting downwards; and alwayes when the treble is going to lead, the sour first bells makes the double change, if the third be behind; but if it be before, the double is on the two first and two last; every bell lieth twice behind, except when the treble goes to lead, if the third be before; and note, when it is 1,3,2, there is a single in second and thirds places, which is twice, once at the Three-score end, and Six-score end.

Old Doubles. On five Bells.

His Peal call'd Old Doubles, is to be rang on five bells, wherein are Six-score changes, which are all Donbles, except only when the whole Hunt leads, and then there is alwayes a fingle change made. It has a whole Hunt, a half Hunt, and three extream bells; every bell leads twice together all the way, and lies twice behind, except only when the whole Hunt leads, and then the bell behind lies there four times together, unless the extream is made behind, and then but twice. Every bell hunts in a perfect course, until the whole Hunt leads, and then the fingle is to be made, at which time the bell in seconds place lies there twice (unless the extream is made in second and thirds place) and every fingle change is made in third and fourths places, except the extreams which

which are (in this Peal) made by the fame rule, and after the fame manner, as I shewed before in the Six-score call'd Doubles and Singles on five bells. In making the single changes in third and fourths places, it is observed, that the bell which lies in fourths place (the change next before the single) is hunting

change next before the fingle) is hunting up; and in making the fingle change, it does dodge with the bell in thirds place, and so hunts up behind; and likewise the bell that lies in thirds place (in the change next before the fingle) is hunting down, and in making the fingle it does dodge with the bell in fourths place, and then hunts directly down.

In this following Peal, the treble is the whole Hunt, the second the half Hunt, and an extream change is alwayes made, when the half Hunt lies before the extream bells next to the whole Hunt; every extream is made between the two farthest extream bells from the half Hunt, as in these following changes.

This Peal of Old Doubles, is grounded on the Twenty-four changes Doubles and Singles on four bells, which are made in a perfect course herein; every time the whole Hunt leads, there are two changes made in the Twenty-four; the half Hunt, and three extream bells, makes the Twenty-four changes, and every single change in this Peal, is a sin-

gle change in the Twenty-four.

This Peal may be rang Six-score several wayes; with one whole Hunt, and half Hunt, it is to be rang six wayes (i.e.) three wayes in hunting up the whole Hunt at the beginning of the Peal, and the other wayes in hunting it down; in which six wayes, the Extream Changes are to be made by the same rule, and in the same manner, as those in the Six-score Doubles and Singles on five Bells, and Paradox before set down; so that with the twenty Hunts, it may be rang twenty times six wayes, which makes Six-score.

In these Six-score wayes, the whole Hunt is before the Bells when every fingle Change is made; but it may be rang Six-score several wayes more, by making the single Changes when the whole Hunt

Hunt lies behind them, which being never practifed, I will say no more of it.

For the convenience and benefit of the Practitioner, I have set down certain rules, shewing how to begin each Peal of Old Doubles (with any Hunt) by the former course (i.e.) in making the single Changes, when the whole Hunt lies before the Bells, these Rules serving only for moving the whole Hunt at the beginning of each Peal, for it may be hunted either up or down.

In hunting either the treble, third, or fifth Bells up, the first change is made between the four foremost Bells, thus.— 12345:21435.

The treble down, the first change is single in third and fourths places, unless the half Hunt lies so, as that the Extream is to be made.

-The third or fifth down, the first change is between the four hindmost Bells, thus.—12345:13254.

-The second or fourth up, the first change is between the four hindmost Bells.

The second or fourth down, the first change between the four foremost Bells.

In ringing any of these Peals, where the first change is made between the four hindmost Bells, it must be made at the Back-stroke, otherwise the Bells will cut Compass all the way; every double change is made either between the four foremost, or four hindmost Bells.

New Doubles. On five Bells.

N this Peal of New Doubles, there are Six-score Changes, which are all double, except only when the whole Hunt leads, and then there is alwayes a fingle Change made; it has a whole Hunt, a half Hunt, and three Extream Bells. The whole Hunt has a perfect course in hunting up and down, and lies twice before, and twice behind. When the whole Hunt leaves the thirds place hunting up, then each Bell that comes into that place, lies there twice, and then moves up behind; and the Bells in treble and seconds places, does continue dodging from the time that the whole Hunt hunts up out of thirds place, until it comes into that place again hunting down; and that Bell which comes into thirds

92 The Art of Ringing.

thirds place (when the whole Hunt leaves it hunting down, lies there twice, and then moves up behind) and the next Bell that comes into that place, lies there twice also, and then moves down before the Bells. But note, that Bell which lies in the thirds place (in the Change next before the Extream) continues there, until the whole Hunt hunts up into that place, and then it moves down; when the whole Hunt leads the Bell in seconds place, lies there twice together, and then moves down before the Bells; and every Bell that comes behind, lies there twice, except only in the Change next before, and that next after the whole Hunt leads; every fingle Change is made in third and fourths places, except the Extreams, which are also single Changes, and made between the two hindmost Bells, when the half Hunt lies before the Extream Bells next to the whole Hunt.

These directions are only for Ringing this
Peal next following; but it may be
Rang many other wayes, by making
the Extream Changes in other places,
of which I shall speak more anon.

This Peal may be Rang Six-score several wayes. With one whole Hunt, and half Hunt, it may be Rang six wayes; in three of which, the whole Hunt is to be hunted up, and in the other three wayes it is to be hunted down; which six wayes are to be Rang, by making the Extream changes by the same rules, and in the same manner, as in Doubles and Singles on five Bells, Old Doubles, and Paradox, before set down; so that with the twenty Hunts, it may be Rang twenty times six wayes, which makes Six-score.

This Peal is grounded on the Twenty-four Changes, Doubles and Singles on four Bells, the half Hunt and three Extream Bells makes the Twenty-four Changes in perfect course; and in the same manner, as I shewed you in Paradox, and Old Doubles.

These following rules shews how to

begin any Peal of New Doubles.

In hunting either the treble or fourth up, the first change must be double between the two first, and two last Bells, thus.—12345:21354.

In hunting the treble down, the first change is single in third and fourths places,

The Art of Ringing. 95 places, unless the extream is to be made

The fourth down, the first change is be-

tween the four first Bells.

Second up, first change double between the

four hindmost Bells.

Second down, the first change is double between the two first, and two last Bells.

Third up, first change double between the four foremost Bells.

Third down, first change double between the four hindmost Bells.

Fifth up, double between the four first Bells.

Fifth down, first change double, two first and two last Bells.

Grandsire on five Bells.

Randfire is the best and most ingenious Peal that ever was composed, to be rang on five bells, it having no dependance on the course of any other Peal. There are Sixfcore changes in it, in pricking of which, there is the greatest variety of any other Peal whatfoever; for it may be prick't or rang some thousands of wayes. The common way of ringing it, is to make the Bobs and fingle changes when the whole Hunt leads, which courfe and

7

and method I will first set down, and afterward fay fomething of the other wayes in ringing it. It has a whole hunt and half hunt, the changes are all double except two, which are fingle. The whole hunt has a perfect course in hunting up and down, and lies twice together before, and twice behind all the way; every other bell has the fame course as the whole hunt, in moving and hunting up and down; and each bell lead twice together all the way, and lie twice together behind, except only at the Bobs. Every Bob-change is made between the two first and two last bells, the bell in thirds place lies still when every Bob-change is made, and then moves down; and every other double change is made between the four bells that stand together (viz.) either the four first, or four last bells. There are two forts of Bobs, one of which is call'd a fingle Bob, and the other a double. The Rule for making the fingle Bob is this - When the whole hunt leads, and the half hunt lies in thirds place, the next is a Bob-change; in making of which, the whole hunt moves out of the trebles place up into the feconds place hunting up, and the bell which lies behind in the change next before the Bob, makes a dodge with the bell in fourths place, and then lies twice behind; and that bell which did dodge with the bell in tenors place, moyes directly down; this is a fingle Bob, that is, one Bob-The Rule for making the double Bob change. is this - When the whole hunt lies in the feconds place hunting down, and the half hunt behind, then there is a double Bob, that is, two Beb-

Bob-changes, one of which is made the next change wherein the whole Hunt moves out of the seconds place down before the bells, and the other Bob is made the next change but one to it in which the wholeHunt moves from before the bells up into the seconds place; the bell which lies in the thirds place when every Bob-change is made, lies there twice, and then moves down. And at every double Bob, the two hindmost bells continue dodging until the whole Hunt moves up into the fourths place. and parts them. Every time the whole Hunt comes before the bells, there is either a fingle Bob, or double Bob made, which comes by turns, one fingle, and the next double throughout the Peal.

The greatest variety of this Peal confists in making the fingle changes. In this way of Ringing it (with any whole Hunt and half Hunt) the first fingle change may be made either at the first, second, third, fourth, fifth, or fixth Bobs, at the fingle or double Bobs at pleasure; observing for a constant Rule, that the half Hunt is alwayes one of the two bells which makes every fingle change; for the fingle changes are so contrived, that (in making them) the whole Hunt and half Hunt are to continue their conflant course as at other At the fingle Bob, the fingle change is made in second and thirds places; and at the double Bob, 'tis made in fourth and fifths places, the other three bells lying still in their places, whil'ft each fingle change is made; the next change to each fingle, is a Bob-change; every fingle change is made when the whole hunt lies

lies before the bells; there being alwayes fixty changes, from the first fingle change to the second; if the first single change is made at a single bob, then the second single change must be made at the third single bob from it; or if the first single change is made at a double bob, the second single change must be made at the third double bob from that where the first was made.

This Peal may be rang without making any fingle change therein, which is done by making a double change to supply the place of it. There are two of these double changes in each Peal; the first of them may be made at any bob within sixty changes from the beginning of the Peal, and the second is to be made just sixty changes from the first. At a double bob, it may be made at either of the two bobchanges; at the first of them, 'tis made by moving the whole Hunt down, and the bell in thirds place up over two bells at once into the tenors place, thus:——41325:14253.

The changes next following these, are the same as at other times. At the single bob, 'tis to be made when the whole Hunt lies in the seconds place hunting down; in which place it may be made two wayes, in one of which the bell in thirds place is to be moved up behind, in the same manner as I shewed you at

the

Now the reason wherefore at this place it may be made two wayes, and at each of the double bob changes but one way, is this; At the double bob, the half Hunt lies behind, which cannot be moved into thirds place, fer that would put it out of its course; but in the fingle bob, the half Hunt lying before the bells, and the whole Hunt in seconds place, fo that neither of those bells are concerned therein; therefore it may be made either by moving the tell in thirds place up behind, or else by moving the hindmost bell down into thirds place, both which are to one effect, though different changes; for these changes are so continued, that (in making them) the whole Hunt and half Hunt are to continue their constant course, as at other times.

I have here set down this Peal of Grandfire, making the treble the whole Hunt; and the tenor the half Hunt, and the first single change is made the fixth bob; that is, the third double bob, which is sixty changes from the beginning of the Peal; you may know the single change, by the line drawn between the sigures at the single change, that next after the line is the single: Grandsire is most commonly rang, as it is here prickt; but it may be rang any other way, according to my directi-

ons before.

Grandfire may be rang another way (i.e.) in making the bobs when the whole Hunt is before the bells (as in the former way) and to make the fingle changes when it lies behind (viz.) the first fingle change may be made at any time when the whole Hunt comes behind, provided it be made within fixty changes from the beginning of the Peal; if it is made the next time the whole Hunt comes behind after a fingle bob, it is in treble and seconds places; after a double bob, it is made in third and security places, the whole Hunt lying

lying behind when each fingle change is made, and the fecond fingle change must be made just fixty changes from the first.

In all the leveral Peals of Grandsire by the course aforesaid, the first changes in each Peal

must be made by these following Rules.

B	153	the		T, 2	furthe de	
	1, 3	the w	Peal.	2, 1	s, the	whole

	5> 4	Wid		55 3	N G	15.

These are the twenty Hunts on five bells, which are set down in Page 26. The two Figures which stand together, do represent the whole Hunt and half Hunt; for instance, the uppermost figures are 1, 3; the 1 is the whole Hunt, and the 3 is the half Hunt, and so of the rest. Where the letter B stands by the Hunt, the first change that Hunt makes is a Bob: But with all the other Hunts, the first change is either between the four first, or four last bells; yet the first change in many of them may be made single, as in 1, 2: 1, 3: 1, 4: 1, 5: 2, 1: 2, 3: 3, 1: 3, 5: 4, 1: 4, 3: 4.5: 5, 1: 5, 4:

In hunting the treble down, the first change is made between the four hindmost bells; and in hunting the fifth bell up, the first change is made between the four foremost bells.

There is another way to Ring this Peal of Grandfire, which is, to make the bobs and fingle changes when the whole hunt lies behind the bells; but this is not convenient to be practifed, therefore I will fay no more of it in this place, having only mentioned this, to thew the great variety there is in this Peal.

This Peal of Grandfire is to be Rang by another course, viz. to make the bobs when the whole hunt is behind the bells, and the fingle changes, when it lies before them. This is the absolute foundation from whence the excellent Peal of Grandfire bob (on fix bells) had its beginning and method, and by practifing to prick down this Peal, and by observing the true course and method of the bobs and fingle changes herein, you may with the greaser eafe understand the true course of the bobs and fingle changes in Grandfire bob on fix bells, for the half hunt, the quarter hunt, and the three extream bells (in Grandfire bob on fix bells) do make these fixscore changes; eve-Ty time the whole hunt leads in Grandfire bob, there are two changes made in this Peal of Grandfire on five bells: And fo confequently, the fingle changes in Grandfire bob are made by the same rule and method as they are in this Peal. The Rule for making the bobs in this Peal, is this (viz.) when the whole hunt lies in the fourths place hunting up, and the half hunt leads, the next is a double bob : And and when the whole hunt lies in the tenors place,and the half hunt in thirds place, then the next change is a fingle bob, the bobs are made between the two first and two last bells, that in thirds place lies still in the bob change, and then moves up. The fingle changes are made when the whole hunt leads; the first fingle change (in Ringing it with any whole hunt and half hunt) may be made at any time when the whole hunt leads, within fixty changes from the beginning of the Peal, accounting the bells as they stand round at the beginning for one of the fixty changes. The fingle change that is made the next time the whole hunt leads after a fingle bob, is made in fourth and fifths places; and that which is made next after a double bob, is made in fecond and thirds places, the half hunt is alwayes one of the two bells which makes every fingle change. If the first single change is made after a single bob, then the fecond fingle change must be made when the whole hunt leads next after the third fingle bob from that after which the first fingle was made; and the fame is observed, in making them after a double bob: there being alwayes fixty changes from the first to the second fingle change in each Peal. This Peal I have here fet down in which I make the treble the whole hunt, the fifth the half hunt, and the first fingle change is made when the whole hant comes to lead next after the first fingle bob: You may know the fingle change, by the line drawn between the figures; the change next below the line, is the fingle, as in the following Peal.

H 4

This Peal may be Rang without making any fingle change therein, there are two double changes which may be made to supply the places of the two single changes; the first of these double changes in any Peal may be made any time when the whole hunt lies in fourths place hunting up, provided you make it within sixty changes from the beginning of the Peal. At a double bob, it may be made at either of the two bob-changes, by moving the bell which lies in thirds place down under two bells at once into the trebles place: Now suppose it were

were to be made the first time the whole hunt lies in the fourths place hunting up in the Peal next before, which is at a double bob, the bells lie thus, 53412; now the treble being the whole hunt must move up behind, and the fourth bell being in thirds place, must move down under two bells at once into the trebles place, thus, 45321; or else it may be made at the next bob-change of the double bob, 53241; here the treble must be moved down into fourths place, and the second bell into trebles place, thus, 25314. It may also be made the change next before the fingle bob, in which change it may be made two wayes; viz, either by moving the bell in thirds place down into trebles place, as in the changes next before, or elfe by moving the bell in trebles place up into thirds place; for instance, two changes before the first single bob (as in the Peal before set down) the bells lie thus, 24315; now the change may be made, either by moving the third bell into the trebles place, thus, 32451; or elfe the bell that leads up into thirds place, thus, 43251; in both which wayes, the whole hunt is to be moved up behind.

There are only two of these double changes to be made in each Peal, if the sirst is made at a double bob then the second must be made at the third double bob from it; or if the sirst of them is made at a single bob, then the second must be made at the third single bob from that where the sirst was made, there being alwayes just si ty changes from the sirst of these double

changes to the fecond in each Peal.

These double changes are the same which in Grandsire

Grandsire bob on six bells, are called true changes; those true changes in Grandsire bob being made by the same rule, and in the same

manner as these are.

In all the Peals of Grandsire, wherein the bobs are made when the whole hunt is behind (according to the Rules next before set down) the first changes in each Peal must be made by these Rules following.

With these ten Hunts, the first change in each Peal is made by hunting down the whole Hunt.	With these ten Hunts, the first change in each Peal is made by hunting the whole

Where the letter B stands next to any hunt; the first change which that hunt makes, is a bob: But with all the other hunts, the first change in each Peal is made double, either between the four first, or four last bells; yet in many of them, the first change may be made single, as in 1, 2: 1, 5: 2, 1: 2, 3: 2, 5: 3, 5: 4, 3: 4, 5: 5, 2: 5, 3:

Before I conclude my directions to this excellent Peal of Grandsire, I will set down one general Rule for making the single changes in

any Peal (at places differing from any of the former Rules) viz. wherefoever the while hunt and half hunt meets together to make a change (which constantly happens every time the whole hunt hunts up, and every time it hunts down in every Peal) the other three bells may lie still in their places, whil'st the whole hunt and half hunt makes the change; which being made, the whole hunt, the half hunt, and the other bells are immediately to proceed in their courfe; which fingle change is as effectual, as those which are made by the Rules aforesaid. Observing to make the first fingle change in any Peal, within fixty changes. from the beginning; and the fecond fingle change must be made (just fixty changes from the first) between the whole hunt, and half hunt, which two bells will in course lie in the fame places where the first fingle change was made.

The Seven-Score and four on six Bells.

This Peal containing Seven-score and sour changes, is to be Rang on six bells, in which, the treble and tenor are both whole hunts, and the second is the half hunt; the whole hunts do both hunt at one and the same time in a direct course, one up, and the other down; and alwayes when one of them lies before the bells, the other lies behind them; and when that hunt which lies before the bells, leaves the trebles place hunting up, the other hunt

hunt lying hehind, leaves the tenors place hunting down; each hunt lies only twice together before the bells, and twice behind

throughout the Peak

The second bell is the half hunt in this sollowing Peal, for the second, third, sourth and fifth bells make the twenty sour changes herein; every time the whole hunts come before and behind the bells, there is one change made in the Twenty-sour (which is alwayes once in six changes) the second bell being the hunt on the Twenty-sour; so that every time it comes before or behind the extream bells, there is an extream change to be made, which in the sollowing Peal is made between the two farthest extream bells from the second. I have only set down part of this Peal, which is sufficient to shew the course and method thereof.

At the extream change next before, I have drawn a line between the figures, that next below the line is the extream: The aforefaid Peal may be Rang with any other whole hunt, or half hunt; and also the Twenty-four changes doubles and fingles, may I a made in the room of the plain Twenty-i ur in the aforefaid Peal.

Tribles.

Trebles and Doubles on fix Bells.

Here are many Peals of Trebles and Doubles to be Rang on fix bells, as, Sixscore changes, Seven-score and four, Twelvescore, and Seven-hundred and twenty. In each of which Peals, the changes that are made from the time that the whole hunt leaves the trebles place hunting up, until it comes down into that place again, are all made in one and the same manner; so that the only difference in these Peals, consists in making the changes when the whole hunt leads. These Peals are called Trebles and Doubles, because one is a treble change (that is, 3 changes made together, in which all the fix bells do change their places, thus, 123456:214365:) and the next is a double change between the 4 bells, in the midft, thus, 241635! And in this course the changes are alwayes made from the time that the whole hunt leaves the trebles place hunting up, until it comes down into the trebles place again; and in Ringing this Peal,'tis observed, that every hell does hunt in a perfect and direct course, and lie twice together before, and twice behind, until the whole hunt leads.

The manner of Ringing the Seven-score and sour, is the treble and tenor are both whole hunts, and the second is the half hunt; the suffichange is a treble change, and the next a double change, as I shewed you be-

fore;

110 The Art of Ringing.

fore; in which course they are made, until the treble leads again, and the tenor lie behind; at which time there's a single change to be made in third and fourths places: But when the half hunt lies next to the treble, then the next single change must be made in fourths and sifths places, as in this following Peal, where I have only fet down part of it for an example.

123456 132546 514362421653 326154

This Peal is grounded on the Twenty-four changes doubles and fingles, the second, third, fourth and fifth makes the Twenty-four changes; the second bell is the hunt in the Twenty-four, therefore the extream in the Peal next before, is made between the two farthest extream bells from it when it lies before them: At the extream changes there's a line drawn between the sigures, but the extreams may be made every time the second lies behind the extream bells; or else, every time it lies before and behind them, in the same manner, as I told you before in my directions to the Twenty-four Doubles and Singles: And this Peal

may be also Rang with any other whole hunts, or half hunts.

In the Six-score Trebles and Doubles, the changes are the fame as in the Peal next before. until the whole hunt leads, at which time (in this Peal) there is a double change to be made between the four hindmost bells; but when the whole hunt leads, and the half hunt lies next to it, then there is a fingle change to be made, either between the two nearest bells to the half hunt, or else between the two farthest bells from it; there are but two single changes in the Peal, and the second single change must be made between those two bells which made the first. In this following, the treble is the whole hunt, and the fecond the half hunt, and the first single change is made when the bells do lie 124365 : which is fixty changes from the beginning of the Peal; after the whole hunt has at first hunted up and down again: I have fet down only those changes which are made every time the whole hunt leads.

351624	146253	163524	123456

The course of the Twelve-score, and the Seven-hundred and twenty, are both one and the same; for the Twelve-score changes, are only part of the Seven-hundred and twenty. There's a whole hunt, a half hunt, a quarter hunt, and three extream bells in the Sevenhundred and twenty; the changes are all treble and double (in the same course, as in the Six-score next before set down) until the whole hunt leads, and the half hunt lies next to it, at which time there's a fingle change to be made in fourth and fifths places: But when the whole hunt leads, and the half hunt lies next to it, and the quarter hunt lies next to the half hunt, then there's an extream to be made, which is a fingle change, and made between the two farthest extream bells from the quarter hunt; and by observing this course, you may prick down, or Ring the Seven-hundred and twenty: But if you would only Ring Twelvescore changes (and then end there, by bringing the bells round) you must make no extream change at all; for in making every fingle change in fourth and fifths places, the bells will come round in course at the end of Twelve-score changes if you make no extream change to carry the Peal forward. In the following changes, the treble is the whole hunt, the 2 is the half hunt, the 3 the quarter hunt, and the 4, 5, and 6, are the extream bells. It being not much material to fet down this Peal at large, therefore after the treble(which is the whole hunt) has hunted twice up and down, I have put down only the two changes which are made every time the treb'e leads to the end of the Twelve-score, as follows.

123456	654123	135462	153246

The last change is 123546: which is at the end of Twelve-score changes; and here you see, that the whole hunt, the half hunt, and quarter hunt, do lie next to each other before the extream bells; therefore the bells may either be brought round, by making the single change in the same place, as those next before, are made thus, 123456: or else, if you would proceed forward to the end of the Sevenhundred and twenty, then the next must be an extream change between the fourth and sixth, which are the 2 hindmost bells, thus, 123564: and by observing to make an extream change

114 The Art of Ringing.

behind every time the 1, 2, 3, lie together before the bells, the bells will come round in
course at the end of the Seven-hundred and
twenty; at the end of every Three score changes, there's a single change throughout the
Teal, and an extream change at the end of
every Twelve-score. This Peal (by the Rules
aforesaid) may be Rang with any whole hunt,

half hunt, and quarter hunt.

In this Peal is contained the Six-score changes of Old Doubles on five bells, and also the Twenty-sour changes Doubles and Singles on four bells; the half hunt, the quarter hunt, and three extream bells, makes the Six-score changes of Old Doubles in a perfect course; and the quarter hunt, and three extream bells, do make the Twenty-sour changes Doubles and Singles. Every time the whole hunt leads, there are made two changes of the Six-score; and every time the whole hunt leads, and the half hunt lies next to it, there are two changes made in the Twenty-sour.

Grandsire Bob. On six Bells.

In this Peal of Grandstre Bob, there are Seven-hundred and twenty changes, in Ringing of which, there is the same course, as in Trebles and Doubles (before set down) until the bob-changes come to be made; this Peal may more properly be called Trebles and Doubles than the former, because all the changes throughout the Seven-hundred and twenty.

tre treble and double, except only the two fingle changes: But in Ringing an Eighteenfcore (which is half the Seven-hundred and
twenty, and a complete Peal of it felf) the
changes are all treble and double without any
fingle change therein; for you must know,
that in any Peal of Grandsire bob, the bells
will come round in course at the end of Eighteen-score changes, if you make no single
thange to carry it on farther to the end of the

Seven-hundred and twenty.

This Peal has a whole hunt, a half hunt, a quarter hunt, and three extream bells; every bell hunts in a direct course, and lies twice together before, and twice behind, until the whole hunt leads, and then the four hindmoft bells do dodge, that is, they make a double change; in which 'tis alwayes observed, that the two bells which lie in third and fifths places (in the change next before the dodge) are hunting down, and in making this double change, each of those bells do dodge with the bell next above it, that is, they move up over one bell, and then each of them moves directly down; and the two bells that lie in fourth and tenors places in the change next before every dodge, are hunting up, and in making the dodge change, each of those bells do move down under one bell, and then they move up again in their conrse, as before; the dodge changes in all Peals of Trebles and Doubles, are made in the same manner as these.

There are two forts of bobs in this Peal, viz. a fingle, and a double bob; the Rule for making the fingle bob, is this, when the whole

hunt leads, and the half hunt lies in tenors place, and the quarter hunt in fourths place, the next change is a bob; and when the whole hunt leads, and the half hunt lies in fifths place, and the quarter hunt in seconds place, then there is a double bob, that is, two bob-changes; one of which is made the next change, and the other is made the next time the whole hunt leads after. The bobs are all double changes, and made in one and the fame manner (i.e.) the leading bell, and that in fourths place, do both lie still, whil'st the two bells in fecond and thirds places, and those in fifth and tenors places make the bob-change; and as foon as 'tis made, the bell in fourths place moves directly down. The half hunt is alwayes one of the two hindmost bells which makes every bob-change.

In Ringing this Peal, there is a Rule obferved, whereby the person that does Ring the quarter hunt, may give notice of the bobs before they come to be made, without which it were impossible to Ring it; the Rule is this: In the dodge which is made between the four hindmost bells every time the whole hunt leads, if the half hunt and quarter hunt do dodge in fifth and tenors place, then the next time the whole hunt leads, there's a fingle bob; if they dodge in fourth and thirds places, then there's a double bob, that is, two bobchanges, one of which is made the next time the whole hunt leads after the dodge, and the other is made the next time the whole hunt leads after the former is made: He that does Ring the quarter hunt, may give notice of every bob-change, by faying (Bob) when the whole hunt is going to lead, which is a change

next before the bob is to be made.

There are certain Rules very convenient to be known by all that practife to Ring this Peal; (viz.) he that does Ring the whole hunt, must observe that the bell which he first follows when he leaves the trebles place hunting up, he must follow the same bell the next time he lies behind; and the fecond bell which he follows in hunting up, he must also follow the fame bell when he next leaves the tenors place hunting down; and likewise, the third bell which he follows in hunting up, he must also follow the same bell when he leaves the fifths place hunting down: For instance, in the first change of the following Peal, the bells stand thus, 214365: here the treble (being the whole hunt) does first follow the second, therefore when the treble has hunted up, and lies behind it, follows the fecond again, as in this change, 65421: And again, the second change of the following Peal, is 241635: here the fourth is the fecond bell, which the treble follows in hunting up, therefore he follows that bell again the next time he leaves the tenors place hunting down, as in this change, 563412: which course is observed throughout the Peal. And in Ringing any other bell (befide the whole Hunt) 'tis observed, that the next time you lie before the bells after a bob, that bell which you first follow in hunting up, you must also follow the same bell when you lie behind; and the same bell you must first follow every time you hunt up, and every time you lie behind, hind, until the next bob comes to be made; but if the whole hunt is the second bell which you follow in hunting up, then you must follow the whole Hunt when you lie behind; and the next time you lead, and lie behind, you must follow the former bell as before, until the bobs come to be made; and after the bobs, the course is the same (though you do not follow the same bell) as before.

These Rules and Directions before set down, are to be observed in Ringing any Peal of Grandsire bob with any whole Hunt, half Hunt, and quarter Hunt: An Example I have here set down, wherein the treble is the whole Hunt, the second the half Hunt, and the fourth the quarter Hunt, as in these following

changes.

Here are just Eighteen-score changes already made, and the bells may either be brought round in their places, by making a dodg-change behind (according to the common course, thus, 124365? but to have proceeded forward in 123456 the 720, the last should have been a fingle change in third and fourths places, thus, 124365 the fingle change being made, all the 123465 Sfollowing changes to the end of the 720 are to be made, by the fame rule and course as those before set down, the last change of the 720 being also a single change, and to be made in the same place, and between those two bells which made the former fingle, thus, 1243 56? which fingle change brings the bells 123456 Fround in their right places at the end of the 720.

This Peal of Grandfire bob may be Rang with any whole Hunt, half Hunt, and quarter Hunt; but there being some difficulty in beginning many of the Peals, I have therefore set down Directions for beginning each Peal,

as follows.

1,2,4 1,2,5 1,3,2 1,3,6 1,4,6 1,5,3 1,5,4

1,6,3

In Ringing Grandsire bob with any of these eight Hunts, the sirst changes in each Peal are to be made in the same manner, as those in the Peal before set down, until the sirst bob in each Peal comes to be made.

in each Peal is a dodge between the four hindmost bells: thus, 123456 1.4.5

Each three figures that stand together next before, do represent a whole Hunt, a half Hunt, and quarter Hunt; for instance, the uppermost figures in the first Column, are 1.2.4. there the treble is the whole Hunt, the second the half Hunt, and the fourth the quar-

ter Hunt, and so of the rest.

In making the treble the whole Hunt, the fifth the half Hunt, and the fixth the quarter Hunt; the first change is a dodge between the four hindmost bells, in which the half and quarter Hunt do dodge together in fifth and tenors places, therefore the next time the whole hunt comes before the bells, there's a fingle bob.

In ringing treble, tenor, and fifth, the whole Hunt moves up the first change, thus, 214365, and so on in the common course until it comes next before the bells, at which time

there's a fingle bob.

Inringing treble, fourth, and third, the whole Hunt moves up the first change, thus, 214365, and so forward in the common course, until it leads again; at which time there's a bob-change to be made, and another the next time the whole Hunt leads after that, it being a double bob.

Inringing treble, third, and fourth, the first

is a dodge-change between the four hindmost bells, in which the half Hunt and quarter Hunt do dodge together in third and fourths places, therefore a double bob is next to be made, one of which bob-changes is the next time the whole Hunt leads, and the other the next following. In ringing treble, fifth, and second, the first is a bob-change; and the next time the whole Hunt leads, there's another bob-change, it being a double bob.

In Ringing treble, fixth, and fecond, and treble, fixth, and fourth, the first change in

each of these two Peals is a bob.

2.4.6 With these four Hunts, the first change 5.3.4 is treble, and the next double, thus, 6.1.2 214365, and so on, till the whole 1.3.1 Hunt leads.

3.5.2 With these five Hunts, the first change must be made between the four bells in the midst, thus,

2.3.5) 132546.

13

In Ringing tener, treble, and second, there's a single bob the first time the whole Hunt comes before the bells.

In all Peals of Grandsire bob, where the first change is either a bob, or a dodge between the four hindmost bells, or else a double change between the four bells in the midst, it must be made at the back-stroke of the bells, otherwise the Peal would cut compass all the way, that is, every bell would come to lead at the back-stroke.

In the Eighteen-score changes before set down, there's a line drawn-between the figures at every bob, the changes next below each line

is a bob-change.

In the Seven-hundred and twenty changes of Grandsire bob, there are two single changes to be made. The first fingle change in any Peal is most commonly made as near the end of Eighteen-score changes (from the beginring) as may be, and 'tis the best way, and most convenient: For instance, sometimes it happens that one or more of those persons who do Ring this Peal, may be weary before they have Rang Eighteen-score changes, therefore upon notice given, the fingle change may be ferborn, and then the bells will in course come round at the end of Eighteen-score changes, making a complete Peal; but after the first fingle change is made, the bells cannot be brought round in courfe, until the Seven-hundred and twenty are all made.

There is great variety in making the fingle changes in each Peal, which may be made at

divers places (viz.)

The first single change in any Peal may be made the second time the whole Hunt leads after the last bob-change of the first or second double bobs, at which places the whole Hunt, half Hunt, and quarter Hunt, do alwayes lie together before the bells, and the single change is to be made in third and fourths places.

The first single change in any Peal may also be made the second time the whole Hunt leads after the first or second single bobs, at which place the whole Hunt and half Hunt do alwayes lie together before the bells; and the quarter Hunt lies behind, therefore it

mult

The Art of Ringing. 125 must be made between the two hindmost bells.

Or if the first bob in any Peal is a double bob, then the first single change may be made the second time the wholeHunt leads after the third double bob in that Peal, at which place the whole Hunt, half Hunt, and quarter Hunt do lie together before the bells, and the single is made in third and four hs places.

Or if the first bob in any Peal is a single bob, then the first single change may be made the second time the whole Hunt leads after the third single bob, where the whole Hunt and half Hunt do alwayes lie together before the bells, and the quarter Hunt behind, therefore the single change must be made behind.

The first fingle change in any Peal may also be made either at the first, second, or third single bobs, at which places the whole Hunt leads, the half Hunt lies in tenors place, and the quarter Hunt in fourths place, therefore it

must be made behind.

The first single change in any Peal may alfo be made the next time the wholeHunt leads
after the last bob-change of the first or second
double bobs, at which place the whole Hunt,
and quarter Hunt do alwayes he together before the bells, and the half Hunt in fourths
place, therefore the single change must be
made in third and fourths places. And in
most Peals, the first single change may be made
the next time the whole Hunt leads after the
last bob-change of the third double bob; and
in some Peals, the first single change may be
made the second time the whole Hunt leads
after

after the third double bob (notwithstanding the first bob-change in that Peal is a single bob, as in the Eighteen-score treble, second and fourth before set down) which falls out according as the first bob change happens to be made either nearer the beginning of the Peal, or farther from it; for in some Peals, the bells will come round in course the next time the whole Hunt leads after the last bob-change of the third double bob. And in many Peals, the bells will come round at the fore-stroke the second time the whole Hunt leads after the last bob-change of the third double bob, &c.

There are two fingle changes in everySevenhundred and twenty, which are alwayes made when the whole Hunt leads, the last fingle change in every Peal being constantly made just Eighteen-score changes from the first; for

making of which, observe these Rules.

If the first single change (in any Peal) is made the second time the whole Hunt leads after a double bob, then the second single change must be made the second time the whole Hunt leads after the third double bob, accounting from the place where the first sin-

gle change was made.

If the first single change in any Pear is made the second time the whole Hunt leads after a single bub, then the second single change must be made the second time the whole Hunt leads after the third single bob, accounting from the place where the first single change was made. Or if the first single change is made at a single bob, then the second single change must be made at the third single bob, accounting from the

the place where the first single change was

The second single change in every. Peal must be made between those two bells, and in the fame place where the first fingle change was made; and the whole Hunt, half Hunt, and quarter Hunt, will in course lie in the same places at the second single change, where they lay at the first: either the half Hunt, or quarter Hunt, are alwayes one of the two bells which makes every fingle change. But there are many other wayes to make the fingle changes, viz. to make them between the haif Hunt, and quarter Hunt, at any dodge, where those two bells do dodge together next before a bob, &c. of which I need not fay any thing more in this place, having already fet down all those wayes which are most easie and convenient to be practifed.

In Ringing this Peal of Grandsire bob, (with any whole Hunt, half Hunt, and quarter Hunt) if there's no single change made within Eighteen-score changes from the beginning of the Peal, the bells will in course come round in their right places, just at the

end of Eighteen-score changes.

In any Peal of Grandsire bob, where the first is a double change, and made at the back-first, the last change of the Peal (which brings the bells round in their right places) is a treble change, and made at the fore-stroke.

The Seven-hundred and twenty changes of Grandfire Bob may be Rang without making any fingle change therein, which way of Ringing it, is call'd Grandfire Bob True : that is ? the changes are all true trebles and doubles without any fingle change therein. There are made two double changes (contrary to the course of all the double changes in the Peal) to supply the place of the two fingle changes, which two are called True changes; and to be made divers waves, and at several places. The first true change in any Peal may be made at the first, second, or third double bobs either at the first or second bob-change of each. the first bob-change of any double bob it may be made, by moving the Bell in fourths place down under two Bells at once into the feconds place, and the two hindmost Bells must make a change at the same time: for Example, in the Eighteen-score of treble, second and fourth before set down, at the first bob-change of the first double Bob, the Bell's stand thus, 143526. Now the true change is made, by moving the Bell which lies in fourths place down under two Bells at once into feconds place, and the two hindmost Bells, are at the same time to make a change thus, 154362. At this place it may be made another way, by moving the hindmost Bell down under two Bells at once into the fourths place, and the two Bells in fecond and thirds places are at the fame time to make a change thus, 13 4652. At the last Bob-change of each double Bob, it may also be made two wayes; one of which, is to move the Bellin fourths down into the feconds place, and the two hindmost Bells at the same time to make a change, as I shewed you before: But the best and easiest way is to move move the bell which lies in fourths place up over two bells at once into the tenors place, and the two bells in fecond and thirds places to make a change as at a bob: for instance, at the last bob-change of the first double bob in the Eighteen-score before set down, the figures stand thus, 143652. Now the bell in fourthe place must be moved up behind, and the two bells in second and thirds places are to make a change, 134526. The second True change in every Peal must be made just Eighteen-score changes from the first, in making of which, these Rules are to be observed. If the first true change in any Peal is made at the first bob-change of a double bob, then the fecond true change must be made at the first bob-change of the third dcuble bob, accounting from the place where the first true change is made, but not reckoning that for one of the three: or if the first true change is made at the last bob-change of a double bob, then the fecond true change must be made at the last bob-change of the third double bob, accounting from the place where the first true change was made, but not reckoning that for one of the three. And the second true change in every Peal muß be made in the fame manner and place as the first; the true and fingle changes in Grandfire bob, are both to one and the same effect (i.e.) to alter the course of the extream bells; for in making these changes, the whole hunt, half hunt, and quarter hunt are to continue their constant course without varition, neither of those 3 bells being any otherwife concerned therein, than at the change which should have been made, if the single or true change had been forborn.

There is another way to Ring this Peal of Grandfire Bob, by a course differing from the When the whole Hunt leads, the half Hunt lies in fifths place, and the quarter Hunt in fourths place, then the next change is a fingle bob; and when the whole Hunt leads, and the half Hunt lies in fifths place, and the quarter Hunt in thirds place; then the next change is the first bob-change of a double bob; the bobs and dodge-changes herein are made in the fame manner, as those in the former way: But the bobs herein are called by a Rule differing from the former, viz. when the whole Hunt and half Hunt do lie together before the bells, and the quarter Hunt (lying in fourths place) dodges with the bell in thirds place, then the second time the whole Hunt comes before the bells (from that place) there is made the first bob-change of adouble bob, the fecond bob-change being made the next time the whole Hunt leads after. When the whole Hunt and half Hunt do lie together before the bells, and the quarter Hunt (lying in fifths place) dodges with the bell in tenors place, then the fecond time the whole Hunt leads (from that place) is made a fingle bob.

There are two fingle changes in the Sevenhundred and twenty, the first fingle change in any Peal may be made at the first, second, or third fingle bobs, at which places it must be made between the 2 hindmost bells; or the first fingle change may be made the next time the whole Hunt leads after the first, second, or third fingle bobs, at which places 'tis alwayes

made

made between the two hindmost bells. The first single change may also be made the next time the whole Hunt leads after the last bobchange of the first, second, or third double bobs, where it must alwayes be made in third and fourths places. But in some few Peals it happens, that the bells will come round at the fore-stroke the next time the whole Hunt leads after the third single bob, and also after the last bob-change of the third double bob, which falls out according as the first bob-change in each Peal is made, either nearer the beginning, or farther off.

The second single change (in every Peal) must be made Eighteen-score changes from the first, in making of which, these Rules must be

observed.

If the first fingle change is made at a fingle bob, then the second single change must be made at the third single bob from the place where the first was made. Or if the first single change is made the next time the whole Hunt leads after a single bob, then the second single change must be made the next time the whole Hunt leads after the third single bob, accounting from the place where the first single change was made. And the same Rule is observed in making it after a double bob.

The second single change in every Peal must be made in the same place, and between those two bells which made the first single change: But (in Ringing this Peal) if you make no single change, the bells will in course come round at the end of Eighteen-score changes.

The way to begin feveral of these Peals, is as follows. K2 In

In Ringing treble, third, and fifth; and fecond, third, and fifth; and also third, fifth, and fecond; the first change is treble, and the next double, and so forward in the common course of trebles and doubles, until the first Bob in each comes to be made. In treble, second and third, the first changes are treble and double in the common course; and the second time the treble leads, there's a double Bob. In treble, tenor and second, the first changes are treble and double in the common course; and the fecond time the treble leads, there's a fingle Bob. In treble, second and fifth, the first change is a dodge between the four hindmost Bells; and the second time the treble leads, there's a fingle Bob. In second, fourth and tenor, the first change is made between the 4 Bells in the midft. In treble, second and fourth, the first change is a dodge behind; and the fecond time the treble leads, there's a double Bob.

Changes on eight Bells,

There are 40320 feveral changes on 8 bells, which to Ring it is altogether impossible; the greatest Peal that ever was Rang on 8 Bells, is 1680, being only a third part of the changes on seven Bells, which are to be Rang with a whole Hunt, half Hunt, quarter Hunt, half quarter Hunt, (for so you may term it) and three extream Bells: But the most complete and musical Peal that ever was Rang on eight Bells, is Grandsire Bob, treble, second and sith, Half-pulls, on 1,2,3,5,6,7, the fourth and the tenor lying behind every change, thus, 123767,48, which has of late been practised.

by the Colledge-Youths, and excellently well performed by them. Grandsire, and Tendring Six-score on eight Bells makes good Musick, 7.4.8. lying behind every change: And a Six-score (four extreams) on the six Bells in the midst, the treble leading all the way, and the tenor lying behind, making a change at sirst between the 4 and 5, and then proceeds forward in the Six-score, making the second the whole Hunt, and the seventh the half Hunt, it makes excellent Musick; but after the Six-score changes are made, the fourth and sist must change their places again to bring the Bells round.

35678,241 The most musical Peals that are 12357,864 commonly Rang on eight Bells, are these Six-scores on five, the other three Bells lying behind every change: For example, the uppermost fig. are 35678,241. here the 35678, makes the Six-score changes, 3 the whole hum, and 8 the half Hunt, or any others, and 2 41. strikes behind every change, in the same order as they now lie, and so of the rest. The three Bells which are to lie behind, must first be hunted up one after the other in order, before any of the Six-score changes are made. The Seven-score and four on the fix middle Bells, the treble leading, and the tenor lying behind every

Of Hanging Bells.

change, makes good Musick.

First, for the Stock, much need not be said, but of placing the Canrons or Crown of K 2 the

134 The Art of Ringing.

the Bell into it, which is called Hanging of a Bell, I shall speak fomething: First, find out whether the Cannons be upright and true, then raise the Bell up by someRope tyed to the Cannons, and fo that the Bell hang level, which you may find, by applying a Plumet to the brim, then fasten a string to the Crown-staple within the Bell, then (a Plumet being tyed to the other end of the firing) if the firing hang in the midst between the two sides of the Bell whereon the Clapper should strike, the Crown-staple is cast into the Bell true: Now when you have hung the Bell, and let the Gudgeons in true by Keys (for therein confifts the main point of the going of a Bell) then if the Clapper hang in the midst between the two striking sides, and the Stock stand upright, the Bell is well hung.

If a Bell have a longer stroke on the one side, than the other, trus up that side which hath the short stroke more, or let the other side down, and put a piece or two of Leather in, according to the stroke; but sometimes the fault of the stroke is in the Sally, which you may remedy, by tying the Fillet (or little Cord about the rim of the Wheel, which causeth the dancing of the Rope) nearer, or farther off the main Spoke; nearer makes a short stroke,

farther off the Spoke, a long one.

And observe, that the trussing or taking up of a great Bell far into the Stock by a notch, makes the Bell go easier, and lie lighter at hand (that is) when it is set; for the farther the brim of the Bell is from the centre of gravity, the heavier it is: Now the centre of gravity,

vity is a supposed line drawn through the Stock from one Gudgeon to the other; but note, if you truss a Bell up, that the Crown-staple be much above the Gudgeons, you must fasten a salse Eye to the Crown-staple, and to this fasse Eye hang the Clapper, otherwise it will not strike so freely: Now small Bells must be trussed up short, for else the Bell hanging low, and setching a great Compass in the swing, and having but little Compass in the brim, the Clapper keeps along by the side of the Bell, and gives no blow at all; but being hung short, the Bell setches a quick and short Compass, equal to the bigness of the brim, and the Clap-

per strikes well.

Now for the tempering of the Gudgeons, I leave it to the judgment of the Workman; but a word or two of the polishing of it. After it is filed, or turned exactly round, take two pieces of Oak, and ovl one fide of each, and threw fine Sand thereon, and clap them in a Smiths Vice, with the round of the Gudgeon between, then turn it about, until you think it is fufficiently polifhed, then oyl the fides of the pieces of Oak wherein there is no Sand, and so clap them in a Vice, with the Gudgeon between, as before, then turn it round, and it will polish the Gudgeon wonderful smooth; and if the Brasses are likewise well polished, the Bell will go as well at the first, as ever: Now by the neglect of this, the roughness of the Gudgeon will wear the Braffes fo unequally, that the Bell will never go smooth and steddy.

Now I would advise all Bell hangers to hang Bells with bolts of Iron to come from

136 The Art of Ringing.

the Cannons through the Stock, and to fasten them with Keys at the top of the Stock, and not with plates nailed on the sides; for they are mighty inconvenient to fasten a bell that is loose in the Stock, or to alter the stroke.

As for the Rowle, let it not be without, nor within the hollow of the fide of the Wheel; nor above, nor below the hollow at the bottom of the Wheel. Now the bigger a Wheel is, if the Frame will permit, the bell will go the better; when the wheel is new, nail Stays from the Stock to each Spoke, to keep it from

warping.

Tis very convenient (if the Frame will permit) to fasten a piece of Timber about half a foot long on the end of the main Spoke at the top of the Wheel (whereon the end of the bell-rope is fastned) with a notch on the end of it; so at the setting of the bell, the Rope will hit into that notch from the Rowle, and this will make the bell lie easier at hand when it is set, and sie better.

FINIS.
